

Section R Scales & Height Measures Medically Approved

Whilst many medical mail order catalogues offer only a single choice of scale, we are very proud to be able to offer the medical profession a wide choice of medical scales from alternative world class manufacturers such as Nagata, Soehnle and ADE.

All of these suppliers have been chosen as they provide accurate, durable and reliable scales at realistic prices and with some unique features not offered by other ranges.

Why not dare to be different and consider the cost effective alternatives from Nagata or the contemporary stylish look of Soehnle, or the solid reliable engineering of ADE?

All Class III scales suitable for medical diagnosis are clearly marked as such and will provide many years of reliable service.

Please remember that only Class III should be used for diagnosis and prescribing in a medical environment.

To assist your choice of scale this section is conveniently categorised into the following sections:

Class III Approved Scales –
bearing the symbol

- 1 Floor Scales
- 2 Column Scales
- 3 Baby Scales
- 4 Wheelchair Scales
- 5 Chair Scales
- 6 Bed Scales
- 7 Hoist Scales
- 8 Height measures and other accessories

ADE Floor Scale

The classic round dial floor scale with extra large platform size. Whilst not recommended for intensive Hospital use the traditional platform scale is the mainstay of most GP practices.

- Easy to read large round dial
- 160Kg capacity
- 1Kg graduation
- Solid steel construction
- Heavy duty lever system
- Extra large platform 320mm x 360mm
- Product weight 4.0Kg

Utilising modern manufacturing techniques ADE have improved this faithful classic with the addition of a larger weighing platform and increased capacity.
